

Unit 4 : Master pages, theme caching, application pages & Data

1. Master page :

Master pages allow you to create a consistent look and behavior for all the pages (or group of pages) in your web application.

Extensio : .master

2. Skin

A skin is a definition of styles applied to server controls in your ASP.NET page

3. Caching

Caching is a technique of storing frequently used data/information in memory, so that, when the same data/information is needed next time, it could be directly retrieved from the memory instead of being generated by the application.

ASP.NET supports three types of caching:

- Page Output Caching [Output caching]
- Page Fragment Caching [Output caching]
- Data Caching
